ZOOPLANKTON D'UNE BAIE EUTROPHIQUE TROPICALE
(Baie d'Ambaro, côte nord-ouest de Madagascar)

7 - Répartition spatiale et annuelle de quelques taxons
Deuxième partie : Chaetognathes, Lucifer, divers.

par

William BOUR
Serge FRONTIER
Didier PETIT

Océanographes biologistes de l'O.R.S.T.O.M.

Ce document fait suite au document n° 28 (1972) de la même série, auquel nous renvoyons pour l'exposé des méthodes employées d'estimation quantitative des diverses catégories planctoniques.

Les commentaires des répartitions des Chaetognathes ont été publiés dans BOUR (W.) et FRONTIER (S.), 1974 : Zooplancton de la région de Nosy Be. IX. Répartition spatio-temporelle des Chaetognathes dans la province néritique. Cah. O.R.S.T.O.M. (sér. Océanogr.) 12(4).

Les commentaires concernant les "groupes divers" (Cténaires, Salpes, Doliolles, Copépodes, oeufs d'Anchois, total organismes) sont donnés dans FRONTIER (S.), 1974 - Contribution à la connaissance d'un écosystème néritique tropical : étude descriptive et statistique du zooplancton de la région de Nosy Be. Thèse Univ. Marseille. Document O.R.S.T.O.M. hors collection.

Les commentaires concernant le genre Lucifer sont à paraître.

Taxons traités dans ce Document :

Sagitta enflata fig. 1A à 1f

Sagitta neglecta fig. 2a à 2f

Sagitta littoralis fig. 3a à 3f

Sagitta ferox fig. 4a à 4f

Sagitta bedfordii fig. 5b à 5f

Krohnitta pacifica fig. 6a à 6f

Total CHAETOGNATHES fig. 7f

Lucifer hanseni : protozoés fig. 8a à 8f ;

Lucifer spp. : mysis fig. 9a à 9f

Lucifer hanseni : juvéniles fig. 10a à 10f ; adultes fig. 11a à 11f

Lucifer penicillifer et chacei : protozoés fig. 12a à 12f

Lucifer penicillifer : juvéniles fig. 13a à 13f ; adultes fig. 14a à 14f

Lucifer chacei : juvéniles fig. 15a à 15f ; adultes fig. 16a à 16f

CTENAIRES fig. 17a à 17f

SALPES fig. 18a à 18f
