SPIDERS OF NEW CALEDONIA

(e)

In 2018, the World Spider Catalogue listed more than 47,000 species of spiders distributed within more than 4,000 genera worldwide. Some scientific studies suggest that at least twice as many species need to be discovered.

New Caledonia, classified as one of the world's biodiversity hotspots because of the incredible richness of its fauna and flora, both heavily threatened by human impacts, is not to be outdone. More than 320 species of spiders have been recorded there since the 19th century, and extrapolations from other places suggest that there are probably more to be discovered.

Much of these species is endemic to New Caledonia but the development of international trade has led to the arrival on the archipelago of adapted exotic (aliens) species to live with Man like Smeringopus pollidus (the ceiling spider, also Mean body size 📕 called «Daddy long legs») which is an anthropophilic species. cephalothorax and There is also so-called ubiquitous species that can be abdomen) in mm found everywhere in the intertropical zone or even A BURGES globally. Endemic species

The giant golden orb spider Nephila sp. weaves very resistant gigantic webs, while others are microscopi or even mimetic in order to blend into the background scenery like the Hersilidae. Some have developed incredible hunting techniques: like a retiarius. Menneus neocoledonicus, called a gladiator spider, throws a silk net on its preys, the wolf spider the ground and the ant spider (Anatea formicaria) mimics its prey to better approach it.

From far being exhaustive, this poster presents a selection of 30 portraits, representative of the extreme diversity of forms and lifestyles, including some emblematic species such as a tarantula, a black widow or a spiny orb weaver, and others that are much less known but are of equal interest to

Araneidae - Trichonephila plumipes

Theridiidae - Argyrodes antipodianus

Theridiidae - Ariamnes colubrinus

Theridiidae - Latrodectus hasselti

Pholcidae - Smeringopus pallidus

Theridiidae - Anatea formicaria

Deinopidae - Menneus neocaledonicus

Sparassidae - Prychia gracilis

Uloboridae - Zosis geniculata

Araneidae - Cyrtophora moluccensis

Salticidae - not identified

Jean Roger & Hervé Jourdan (IRD) -

Cndemia.nc

Pisauridae - Dolomedes sp.

Lycosidae - not identified

Araneidae - Poecilopachys australasia
